INTRODUCTION.

TO facilitate the attainment of Natural Knowledge in one of its moſt conſiderable branches, and to gratify the imagination with one of its moſt elegant amuſements, are the objects of this collection. The one is aimed at by the choice; the other principally by the arrangement.

Birds are, perhaps, the moſt pleaſing of the animal ſpecies; they are the moſt lively and active of all the creatures that are endued with ſelf-motion; and they are adorned with all the ſplendid colours of whatever is moſt beautiful in the vegetable world; they are more active than beaſts or men; they are more ſhewy and variegated than flowers; there is, therefore, no province in all natural hiſtory, that is ſo accommodated to afford a uſeful, and at the ſame time, a rational entertainment, to all taſtes, and to every ſtage of life. For, whilſt the more intelligent ſee with aſtoniſhment the operations of an all-wiſe providence, the more gay and ſuperficial will be engaged by the fineſt ſhew in nature.

For theſe purpoſes, the Proprietor, with great expence and infinite labour, has drawn together into one point of view this Cabinet. They are prepared by an art, he flatters himſelf, never equalled by the moſt celebrated preparations, in all the luſtre of their native

and

and original colours, and disposed in such a manner as to preserve all the spirit of their living attitudes, and those peculiar movements which characterize each species.

But though Birds form the principal part of this collection, they do not compose the whole of it. In order to enlarge and diversify this exhibition, several beasts are taken in, and many curious and beautiful insects, all in high preservation.

If to have chosen a proper object for the public entertainment, and to have laboured to bring it to all possible perfection, be the way to deserve encouragement, He hopes to meet with it, in a discerning age, and a generous Nation.
